Continuation of Attachment(s) 3. Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date: 6/29/06&12/26/07&9/9/08.

1. Claims 14-36 are allowed.
2. The following is an Examiner's Statement of Reasons for Allowance:

The prior art of record (PTO-892 and IDS) teaches the claimed invention substantially, but it fails to teach or suggest singly or in combination a method for receiving an Automatic Repeat Request (ARQ) block, comprising: if an ARQ block is received, determining if a block sequence number of the ARQ block is in a range of a receipt window; if the block sequence number of the ARQ block is in the range of the receipt window, determining if the ARQ block is a duplicate of a previously received ARQ block; if the ARQ block is not a duplicate and the block sequence number of the ARQ block is not less than a highest block sequence number of received ARQ blocks, updating the highest block sequence number of received blocks; and if the ARQ block is not a duplicate and the block sequence number of the ARQ block is equal to a start block sequence number of the receipt window, updating the start block sequence number of the receipt window as the test pattern sets as set forth in independent claims 14 and 20.

The prior art of record also fails to teach or suggest singly or in combination a method for a transmitter to retransmit a packet to a receiver, comprising: if a transmitter does not receive an acknowledgment message for a packet transmitted to the receiver, setting a retransmission timeout; if the retransmission timeout expires, retransmitting the packet; if a maximum management time expires, transmitting a discard message for the packet to the receiver and transiting to a discarded state; and if the transmitter

receives, in the discarded state, the acknowledgment message for the packet or an acknowledgment message for the discard message, discarding the packet from a transmitting buffer as set forth in independent claim 26. Also, the prior art of record also fails to teach or suggest singly or in combination a method for a transmitter to retransmit an Automatic Repeat reQuest (ARQ) block to a receiver, comprising: if the transmitter transmits the ARQ block to the receiver in a not-sent state of the ARQ block, transiting a state of the ARQ block to an outstanding state; if the transmitter does not receive an acknowledgment message for the ARQ block for a timeout in the outstanding state, or if the transmitter receives a non-acknowledgment message for the ARQ block in the outstanding state, transiting the state of the ARQ block to a retransmission-waiting state; if the transmitter retransmits the ARQ block to the receiver in the retransmission-waiting state, transiting the state of the ARQ block to the outstanding state; if a lifetime of the ARQ block expires in the outstanding state, transiting the state of the ARQ block to a discarded state; and if the transmitter receives, in the discarded state, an acknowledgment message for the ARQ block or an acknowledgment message for a discard message for the ARQ block, transiting the state of the ARQ block to a done state as set forth in independent claim 28.

Furthermore, the prior art of record also fails to teach or suggest singly or in combination a method for a transmitter to retransmit an automatic repeat request (ARQ) block to a receiver, comprising: if the transmitter transmits the ARQ block to the receiver in a not-sent state of the ARQ block, transiting a state of the ARQ block to an outstanding state; if the transmitter does not receive an acknowledgment message for

the ARQ block for a timeout in the outstanding state, transiting the state of the ARQ block to a retry-timeout state; if the transmitter receives a non-acknowledgment message for the ARQ block in the outstanding state, transiting the state of the ARQ block to a non-acknowledged state; if the transmitter receives a non-acknowledgment message for the ARQ block in the retry-timeout state, transiting the state of the ARQ block to the non-acknowledged state; if the transmitter retransmits the ARQ block to the receiver in the retry-timeout state, transiting the state of the ARQ block to the outstanding state; if the transmitter retransmits the ARQ block to the receiver in the non-acknowledged state, transiting the state of the ARQ block to the outstanding state; if a lifetime of the ARQ block expires in the outstanding state, transiting the state of the ARQ block to the discarded state; and if the transmitter receives, in the discarded state, an acknowledgment message for the ARQ block or an acknowledgment message for a discard message for the ARQ block, transiting the state of the ARQ block to a done state as set forth in independent claim 33.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

4. The prior art of record (PTO-892) is considered pertinent to applicant's disclosure.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Ton whose telephone number is (571) 272-3828. The examiner can normally be reached on M-F from 8:00 - 5:00.
